	04/10/15 01:22 EST		0	Thunderstorm Wind (EG 52 kt)
	04/10/15 01:22 EST		0	Source: Emergency Manager

Emergency management reported that large trees fell on Graham Rd due to severe thunderstorm winds.

A strong spring storm system approached the lower Ohio Valley on April 9th into the early morning hours April 10th. Isolated severe storms that produced damaging winds and hail developed during the afternoon hours before a long-lived line of severe storms approached late in the day into the early morning hours of April 10th.

PERRY COUNTY --- 1.1 SSE CANNELTON [37.91, -86.74], 0.2 S CANNELTON [37.92, -86.75], 0.3 SW CANNELTON [37.92, -86.75], 1.1 SSE CANNELTON [37.91, -86.75]				
	04/17/15 16:00 EST		0	Flood (due to Heavy Rain)
	04/20/15 01:00 EST		0	Source: River/Stream Gage

Several rounds of heavy rain both locally and well upstream brought the Ohio River at Cannelton to flood. The river crested at 42.3 feet on April 18th, then fell below flood stage on April 20th.

After a very wet and active weather pattern in March, little relief was observed in April across much of the lower Great Lakes and Ohio Valley. Repeated rounds of heavy rain, thunderstorms and occasional severe weather occurred in the Ohio River basin across Indiana, northern Kentucky and portions of Ohio. This resulted in a prolonged period of high water and flooding on the Ohio River, especially from Cannelton to Tell City.

KENTUCKY, Central

BRECKINRIDGE COUNTY --- HARNED [37.75, -86.42]				
	04/02/15 13:58 CST		0	Hail (0.75 in)
	04/02/15 13:58 CST		0	Source: Emergency Manager

The county Emergency Manager reported penny size hail.

OLDHAM COUNTY --- 0.9 SW PEWEE VLY [38.31, -85.49]

Heavy rain brought the Green River at Rochester into flood. The river was estimated to have crested at 17.6 feet early April 6th.				

Storm Data and Unusual Weather Phenomena - April 2015

Location	Date/Time	Deaths & Injuries	Property & Crop Dmg	Event Type and Details
<p>A stalled frontal boundary across the area brought several rounds of showers and thunderstorms to the lower Ohio Valley April 2nd and 3rd. Scattered thunderstorms developed during the afternoon and early evening hours April 2nd, resulting in large hail and damaging winds. Later that evening and into the early morning hours of April 3rd, training thunderstorms resulted in flash flooding across portions of northern Kentucky, greatly impacting the I-64 corridor including the Louisville and Lexington metros. Between 6 and 8 inches of rain fell in the 2 day period and April 3rd ended up being Louisville's 4th wettest day on record. The event garnered national media attention as over 160 water rescues occurred in Louisville alone and several roads were washed out across northern Kentucky. Additional showers and thunderstorms then developed during the afternoon of April 3rd with isolated severe wind damage.</p>				
HANCOCK COUNTY --- 0.6 W HAWESVILLE [37.90, -86.76]

MADISON COUNTY --- 0.9 NW BERE A RICHMOND FLD [37.66, -84.29], 0.7 NNE BERE A RICHMOND FLD [37.66, -84.27]				
	04/07/15 17:57 EST		60K	Tornado (EF0, L: 0.60 mi , W: 35 yd)
	04/07/15 17:58 EST		0	Source: NWS Storm Survey
The tornado first touched down near a ravine just northwest of Jessica Circle where it snapped a few trees. It then moved southeast, destroying two outbuildings. One of the outbuildings was fully packed, weighing several thousand pounds, and another larger outbuilding was pushed off its foundation . The tornado also did some damage to the roof and shingles of a residence at 326 Jessica Circle. The tornado then continued on an intermittent path to the southeast where it did some additional roof damage to another home and snapped several other trees. The tornado lifted just west of Cherokee Lane.				
MADISON COUNTY --- 0.7 S SPEEDWELL [37.66, -84.18], 1.0 S BRASSFIELD [37.66, -84.15]				
	04/07/15 18:03 EST		15K	Tornado (EF1, L: 2.00 mi , W: 215 yd)
	04/07/15 18:06 EST		0	Source: NWS Storm Survey
The tornado first touched down on a farm at 1235 Crooksville Road where it snapped and uprooted several trees, spreading them in several directions. It then continued southeast across Gumbottom Road, where a large oak tree was uprooted. Sporadic tree damage continued southeast towards Walter Lakes Road. Just before the tornado lifted, it did minor shingle and porch damage to a residence along Walter Lakes Road .				
BOURBON COUNTY --- 1.0 SSE PARIS [38.21, -84.24], 1.1 SE PARIS [38.21, -84.24], 1.5 SSE PARIS [38.20, -84.24], 1.4 SSE PARIS [38.20, -84.24]				
	04/07/15 19:10 EST		0	Flood (due to Heavy Rain)
	04/08/15 12:20 EST		0	Source: River/Stream Gage
Heavy rain brought Stoner Creek at Paris above flood stage on April 7th. The river crested at 19.4 feet early on April 8th before dropping below flood stage later that same day.				
A compact storm system interacted with a warm and unstable airmass in the late afternoon and evening of April 7th to produce severe weather over portions of central Kentucky. Wind damage and large hail were common with the strongest storms and 2 tornadoes occurred in Madison County. The heavy rain that fell, already on top of saturated ground, brought a few rivers into flood.

	04/15/15 18:15 EST		0	Flood (due to Heavy Rain)
	04/18/15 08:30 EST		0	Source: River/Stream Gage
Heavy rain that fell on top of very saturated ground brought the Kentucky River at Lockport to flood. The river crested at 36.02 feet late on April 16th.				
After a very wet start to April 2015, another slow moving system brought widespread heavy rain to portions of central Kentucky. Widespread amounts of 2 to 4 inches fell across central and southern Kentucky. Isolated 5 inch amounts were reported. This rain fell on top of already saturated ground and swollen rivers, creeks and streams and as a result, many rivers went into flood for a period of time.

EDMONSON COUNTY --- 1.1 E HUFF [37.25, -86.35], 1.3 E HUFF [37.25, -86.35]				
	04/25/15 20:12 CST		0	Tornado (EF2, L: 0.17 mi , W: 220 yd)
	04/25/15 20:14 CST		0	Source: NWS Storm Survey

A narrow tornado developed quickly just west of 3667 Grassland Black Gold Rd (Highway 1365) and snapped a few softwood and few wood large limbs. It then grew in width and intensity as it crossed Highway 1365 and uprooted, snapped and twisted over 200 trees in a heavily forested area around a deep karst ravine. A drone was used to pinpoint the exact storm end point which was about 100 yards east of Highway 1365 near a farmer's field.

An area of low pressure approached the Ohio Valley from the northwest on April 25th. Ahead of it, a strong warm front sharpened across southern Indiana and central Kentucky. South of the front, sunshine broke out and helped temperatures surge into the 80s, while north of the front temperatures were only in the 50s. At one point, there was a 40 degree temperature difference across the state of Kentucky from north to south! This strong front helped to focus severe thunderstorm development in the late afternoon and evening hours. Many of the storms that formed were supercells, which dropped very large hail. Two of these supercells developed weak tornadoes during the evening hours.
